

A Hole in the Safety Net: How Technology Can Help the Long-Term Care Crisis

Lauren Fecko, Master of Public Policy Program, Michigan State University

Limited Coverage

High Costs

Medicaid Spend Down

Key Findings

- 43%** Seniors interested in remote monitoring for chronic diseases
- 63%** Individuals likely to use telemedicine if it saved them time and money
- 80%** Individuals that think insurance should cover remote monitoring technology
- Reduced hospitalizations and readmissions
- Lower hospital costs and increased savings
- Increase in data that can prevent emergencies
- Increased coordination between actors leads to successful solutions

How Technology Can Help

Next Steps

- Privacy & Security**
Regulations and controls to comply with HIPAA and ensure patient information is safe
- Incorporate into Medicare**
Incorporate technology into Medicare's post payment system.
- Ensure Flexibility of Options**
Technology needs to be adaptable and be easy for patients to use.
- Coordination Across Entities**
Ensure that patients, caregivers, providers, and payers are involved in coordinating a solution
